

RAYKENZIE

PORTFOLIO 2026

Personal CV & Portfolio Website - React/Vite

Smoky Black #11120D	Olive Drab #565449	Bone #D8CFBC	Floral White #FFFBF4
-------------------------------	------------------------------	------------------------	--------------------------------

Owner: Raykenzie Nazaru Fathurrahmansyah

Primary goal: Present personal identity, achievements, independent projects, collaborative R&D work, and contact channels in a credible, human-designed portfolio.

Target audience: Recruiters, universities, competition organizers, collaborators, mentors, and potential clients.

Document	PRD - Personal Portfolio Website
Version	1.0
Status	Ready for implementation
Stack	React + Vite + Tailwind CSS

1. Product Overview

The product is a modern personal CV and portfolio website for Raykenzie Nazaru Fathurrahmansyah. It replaces the previous portfolio with a cleaner editorial layout, clearer project ownership, stronger SEO, and a more professional presentation of achievements, development work, IoT/AI projects, and Research & Development contributions.

1.1 Objectives

- Create a credible public portfolio that feels intentionally designed by a human, not generated from a generic AI template.
- Present independent GitHub projects as primary development work and collaborative repositories with accurate role labels.
- Highlight competition achievements without requiring certificate images.
- Improve discoverability for the name “Raykenzie Nazaru Fathurrahmansyah” in search engines.
- Provide direct access to GitHub, LinkedIn, Instagram, and email using compact icon-based links.

1.2 Non-goals

- No blog or CMS is required for the initial release.
- No authentication or admin panel is required.
- No fake client testimonials, invented metrics, or fabricated project deployments.
- No overly futuristic visual treatment, neon effects, particle systems, or generic SaaS-style sections.

2. Brand & Visual Direction

The visual direction combines editorial typography, asymmetric composition, generous whitespace, real project imagery, and restrained dark/light contrast. The overall character should feel mature, technical, personal, and minimal.

2.1 Color Palette

Color	Hex	Primary use	Notes
Smoky Black	#11120D	Headings, dark sections, footer	Primary contrast
Olive Drab	#565449	Accents, hover states, small labels	Use sparingly
Bone	#D8CFBC	Panels, secondary backgrounds	Soft editorial neutral
Floral White	#FFFBF4	Main background	Primary canvas

2.2 Typography

- Display: Bebas Neue or Anton for oversized headings and section titles.
- Body: Inter or Manrope for navigation, descriptions, and metadata.
- Optional editorial accent: Cormorant Garamond or DM Serif Display for small italic accents only.
- Maximum of three font families.

2.3 Design Rules

- Use thin 1px borders, large section numbers, strong hierarchy, minimal shadows, and varied section compositions.

- Do not repeat the same card layout across every section.
- Use modest border radius; avoid excessive pill-shaped UI.
- Use real portrait photography and real project screenshots whenever available.
- Animations must be subtle: fade, slight translate, image reveal, underline, and small hover scale only.

3. Information Architecture

Primary navigation: Home, About, Achievements, Projects, Experience, Contact. Social links appear as icons only.

Section	Purpose	Required content
Home	Immediate identity and positioning	Name, role, location, portrait, CTA, social icons
About	Short personal profile	School, SIJA, interests, focus, current role
Achievements	Competition credibility	Placement, event, organizer/level, year, short context
Projects	Main proof of work	Independent projects first, collaborative R&D clearly labeled
Experience	Technology journey	Timeline of research, projects, competitions, and R&D
Contact	Low-friction connection	Email, location, GitHub, LinkedIn, Instagram

4. Functional Requirements

4.1 Navigation

- Sticky responsive navbar with text navigation and GitHub/LinkedIn/Instagram icons.
- Smooth scrolling to sections.
- Mobile hamburger or fullscreen menu.
- External links open in a new tab with safe rel attributes.

4.2 Hero

Recommended hero title: “RAYKENZIE NAZARU” with descriptor “Developer · IoT · AI · Research & Development”. Include “Based in Jakarta, Indonesia”, a portrait, a primary “View Projects” CTA, an “About Me” CTA, and social icons only.

4.3 About

Describe Raykenzie as a student at SMK Negeri 1 Jakarta in the Sistem Informasi, Jaringan dan Aplikasi (SIJA) program, with interests in software development, IoT, AI, computer vision, R&D, and technology innovation. Tone must be natural and concise rather than corporate.

4.4 Skills

- Development: React, JavaScript, HTML, CSS, PHP, Node.js, Vite.
- AI & Data: Python, Computer Vision, CNN, TensorFlow/TensorFlow Lite, Machine Learning, Dataset Preparation.
- IoT & Hardware: ESP32, ESP32-CAM, MQTT, sensors, embedded systems, IoT monitoring.
- Tools & Platforms: Git, GitHub, Supabase, Firebase, Vercel, Cloudflare, Postman, Figma, Fusion 360.

- Do not use fake skill percentages.

4.5 Achievements

Show selected achievements as a numbered editorial list or timeline. Certificate images are not required.

- Juara 1 Robotics - Gebyar Merdeka GLITER JAK 2026, tingkat DKI Jakarta; project GRENVIS.
- Juara 1 Water Quality Innovation Competition - SMAN 2 Jakarta.
- Juara 1 ITechnoCup - Politeknik Negeri Jakarta.
- Juara 1 innovation/IoT competition - ITB Widya Gama.
- Juara 3 KIP Jakarta Pusat.
- Finalist Automation Week 8 - Politeknik Perkapalan Negeri Surabaya.

4.6 Projects

Projects must prioritize repositories owned by “raykenzienazaru-dot”. Collaborative repositories may appear, but the role must be clearly labeled as “Research & Development (R&D)” unless repository evidence proves another role.

Project	Category / role	Portfolio note
FABRIX-AI	AI / Computer Vision	Featured owned project; textile/fabric analysis and defect-related AI.
AI_VISION	AI / Computer Vision	Featured owned computer vision work.
IOTERA	IoT / Web Platform	IoT design/development platform.
GWS	Web / Environmental Tech	Garuda Water Sanitation / water-related reporting and monitoring.
AIR-AI	AI / Water Quality	AI-logic web application for water analysis and recommendations.
SOFIA	IoT / Monitoring	Smart Office and Facility Intelligence Assistant.
SIGETA	IoT / AI	Treat SIGETA-related repositories as one portfolio project.
KasirKita	Web / POS	Point-of-sale and cashier management web app.
cucicleane	Client / UMKM	Home/sofa cleaning service website.
bolu	UMKM / Web	Digital presence website for an MSME.
WARU	R&D / Collaborative	Show role as Research & Development (R&D), not developer ownership.

4.7 Project Media

- Inspect repository README and homepage/deployment metadata.
- Use actual deployed project screenshots when available.
- Do not use random stock images or fabricated UI screenshots.
- If no deployment exists, use a simple repository/browser-frame visual without pretending it is the live product.

4.8 Experience / Journey

Use a vertical timeline that emphasizes technical growth rather than corporate employment. Include GRENVIS 2026, WARU R&D, and an “Independent Development” period covering AI, web, IoT, and UMKM projects. Do not invent dates that are not available.

4.9 Contact

- Email: raykenzienazaru@gmail.com
- GitHub: <https://github.com/raykenzienazaru-dot>
- LinkedIn: <https://www.linkedin.com/in/raykenzie-nazaru-fathurrahmansyah-774548387>
- Instagram: https://www.instagram.com/zienaru_/
- Location: Jakarta, Indonesia.

5. Technical Requirements

- Framework: React with Vite.
- Styling: Tailwind CSS.
- Icons: Lucide React and/or react-icons.
- Animation: Framer Motion only when it improves subtle section transitions.
- Reusable components and separate data modules for projects, achievements, and skills.
- No console errors; production-ready build.
- Fully responsive across desktop, tablet, and mobile.
- Accessible color contrast, semantic HTML, useful alt text, keyboard-friendly navigation.
- Target good Lighthouse performance; optimize images and avoid unnecessary heavy libraries.

6. SEO Requirements

- Page title: “Raykenzie Nazaru Fathurrahmansyah | Developer, IoT, AI & R&D”.
- Meta description should mention developer, IoT, AI, computer vision, R&D, Jakarta, and portfolio.
- Use semantic elements: header, nav, main, section, article, footer.
- Add Open Graph metadata.
- Add schema.org Person structured data with full name, email, and sameAs links to GitHub, LinkedIn, and Instagram.
- The full name “Raykenzie Nazaru Fathurrahmansyah” should appear in natural, visible text and metadata.

7. Responsive & Interaction Requirements

Viewport	Layout	Priority
Desktop	Asymmetric editorial grid; large typography	Showcase composition and project media
Tablet	2-column projects where appropriate	Preserve hierarchy
Mobile	Single column; compact navigation	Readability and touch targets

8. Content & Accuracy Rules

- Do not invent achievements, clients, experience years, satisfaction rates, or project metrics.
- Do not claim development ownership for repositories owned by other people.
- For collaborative work, show the role “Research & Development (R&D)” unless contribution history supports another role.
- Do not invent live-demo URLs.

- Use the previous portfolio only as a content reference; the new site should improve visual quality and structure.

9. Acceptance Criteria

ID	Acceptance criterion
AC-01	All six main sections are present and navigable.
AC-02	Portfolio uses the exact four-color palette as the core color system.
AC-03	Social links are icon-based and point to the provided accounts.
AC-04	Achievements are displayed without requiring certificate imagery.
AC-05	Independent projects are prioritized; collaborative work is accurately labeled.
AC-06	The site is responsive and usable on mobile.
AC-07	No fake metrics, fake testimonials, lorem ipsum, or invented deployments.
AC-08	SEO metadata and Person schema are implemented.
AC-09	Production build completes without console errors.
AC-10	Visual result feels editorial and human-designed rather than a generic AI template.

10. Recommended Page Flow

NAV → HERO (Floral White) → ABOUT (Bone) → ACHIEVEMENTS (Smoky Black) → SELECTED PROJECTS (Floral White) → EXPERIENCE (Bone) → CONTACT (Smoky Black) → FOOTER

11. Delivery Checklist

- React/Vite source code organized into reusable components.
- Project and achievement data separated from presentation components.
- Real links verified.
- Responsive layout verified on common breakpoints.
- Images compressed and lazy-loaded when appropriate.
- SEO metadata, Open Graph, favicon, and structured data included.
- README contains local setup and deployment instructions.
- Final deployment tested on Vercel or equivalent static hosting.
